Quick Start Guide – Kurinto Font Folio

1. **Download** one of the release packages from www.Kurinto.com:

   - Lite (a subset of the available fonts)
   - Full (all the available fonts)
   - Dev (the Full package + additional resources for font developers)

2. **Unpack** the release package .zip file into a directory and navigate to that directory.

3. **Navigate** to the /Fonts subdirectory.

4. **Install** all the fonts in this directory.

   On Windows, I recommend:
   [Select fonts] ⟿ [Right-click] ⟿ [Install for all users] (shown at the right)

   On iOS/Apple systems, Right-click (or Control-click) on the font files and choose to open with *Font Book*.

   The *Kurinto User's Guide* (Kurinto_UserGuide.pdf) contains more information on installing fonts.

5. **Restart** your system (to ensure that your editing application will see the new fonts).

6. **Edit** a document in your favorite editing application (*Microsoft Word, OpenOffice, WordPerfect*, etc.) Check that the Kurinto fonts are shown in your application's list of available fonts.
